Odyssey patient app

Empower patients in managing their health journey effectively

OVERVIEW

Odyssey Patient App is a comprehensive mobile application designed to revolutionize the patient experience in healthcare. With a focus on accessibility, convenience, and personalized care, the app offers a wide range of features to empower patients in managing their health journey effectively.

From scheduling appointments and accessing medical records to communicating with healthcare providers and ordering medications, Odyssey Patient App aims to streamline healthcare interactions and improve patient outcomes.

CLIENT

ROLE & DURATION

Lead Product Designer

User Research, Interaction, Visual design, Prototyping & testing

June 2024 - August 2025

The Problem

Traditional healthcare systems often lack efficient communication channels between patients and providers, leading to delays in appointments, difficulty accessing medical records, and limited engagement in managing one's health.

Additionally, patients may face challenges in navigating the complex healthcare ecosystem, such as finding providers, scheduling appointments, and accessing essential services like lab tests and medication orders.

Our main goal, besides answering our research question, was to..:

Enhance the patient experience by providing a user-friendly platform that facilitates seamless communication, convenient access to healthcare services, and personalized care management. By empowering patients with tools to schedule appointments, communicate with providers, access medical records, and manage health-related tasks, the app aims to improve patient engagement, satisfaction, and health outcomes.

User Flow

- Patients download the Odyssey Patient App and create their accounts.
- They log in to access features such as appointment scheduling, communication tools, and medical records.
- Patients search for providers, schedule appointments, and manage their health-related tasks.
- They communicate with hospitals, doctors, and support teams through chat functionality.
- Patients track their wellness metrics and receive personalized health insights and reminders.
- Healthcare providers interact with patients through the app, accessing medical records, communicating with patients, and providing care and support.

HOME, MY APPOINTMENTS, AND BOOK APPOINTMENT

PHARMACY SCREENS

Project Learnings

1. User-Centric Design Approach

Prioritizing the needs and preferences of patients was paramount in creating a successful healthcare app. Understanding user behaviors, preferences, and pain points through research and feedback sessions helped tailor the app's features and functionalities to meet their expectations.

2. Scalability and Flexibility

Designing the app with scalability and flexibility in mind allowed for future expansion and adaptation to evolving healthcare needs. Building a modular architecture and utilizing scalable infrastructure ensured that the app could accommodate growth and accommodate new features and functionalities as needed.

3. Seek out feedback early and continually

The trouble with most of us is that we would rather be ruined by praise than saved by criticism. Keeping the stakeholders/users in loop and testing solutions in whatever form (paper, low-fi or hi-fi) as early as possible saves ample amount of time and re-work.

Smarter, Simpler Business Management for Creators & Entrepreneurs

A powerful all-in-one business platform built for creators, coaches, and digital entrepreneurs to launch, grow, and scale their online businesses — effortlessly.

OVERVIEW

Circuit Webtool, a product of SwipBox, is a cutting-edge web-based platform designed to streamline parcel management and optimize logistics operations.

Tailored for companies utilizing Circuit packaging and intelligent label screens, Circuit Webtool empowers users with advanced features and customizable functionalities to enhance efficiency and improve user experience

The Problem

Running a modern digital business often means juggling multiple tools, disconnected systems, and overwhelming tech stacks — leading to wasted time and lost revenue

Our main goal, besides answering our research question, was to..:

The core mission of Vonza is to empower entrepreneurs and creators by unifying essential business tools into one

streamlined platform. With intuitive workflows, customizable features, and seamless automation, Vonza simplifies your operations — so you can focus on your passion, not your process.

Key Features

1. Dashboard Onboarding

An intuitive onboarding experience that guides users step-by-step, ensuring a smooth start and quicker time-to-value.

2. Vonza Builder

Design and launch websites, funnels, and pages with ease — no coding needed. Drag, drop, customize, and go live in minutes.

3. Workflow Automation

Automate your sales, email campaigns, and customer engagement with powerful, rule-based triggers to save time and boost efficiency.

Key Components

Smart Dashboard

Visual Builder

Custom Automation

AI-Driven Insights

Smooth User Journey

From sign-up to launch, Vonza’s guided onboarding and intuitive UI enable users to complete setup in under 10 minutes.

Users are welcomed with a clean, customizable dashboard and clear call-to-actions for creating their first product, course, or sales funnel.

High Fidelity Design

Mockups will be created to illustrate the redesigned user interfaces, showcasing the improved layout, navigation, and visual elements.

Project Learnings

User-Centric Design is Crucial: Direct feedback from creators highlighted the importance of simplicity, resulting in a cleaner interface and reduced cognitive load.

Step-by-Step Onboarding Increases Retention: Early drop-offs were minimized by designing a progressive onboarding flow with clear milestones.

Automation Must Be Visual: Users preferred visual flow builders over form-based automations — this insight led to a more intuitive automation UI.

Responsiveness Drives Engagement: Many users accessed the platform from tablets and mobiles, so responsive design became a core focus.

Flexibility is Key: Businesses have varied needs — enabling modular control over dashboard widgets, email flows, and builder components improved usability across diverse user types.

SwipBox Design System

This design system is created using atomic design pattern

Color Guide

SwipBox colour shades

Colour variables

The colour variable should have same name as in figma file. The variable are accessible code and to help us to easily make changes if it is required to update.

Example:

primary-25

Primary

The primary colour is your "brand" colour, and is used across all interactive elements, inputs, etc. This colour can define the overall feel and can elicit emotion. The variation 500-500 is the base colour and with 10% darker variation on right left.

CLIENT

The Problem

Inconsistent design patterns, fragmented UI elements, and repetitive design efforts were hampering the development process, leading to inefficiencies, inconsistencies, and a lack of cohesion across digital products.

There was a need for a solution that would streamline the design process, foster collaboration, and facilitate the creation of cohesive user experiences.

Design system

Figma Artitecture

Our main goal, besides answering our research question, was to...:

The primary goal of implementing the Atomic Design System was to establish a unified framework that would serve as a single source of truth for design elements, patterns, and guidelines. By adopting a modular approach and organizing design elements into atoms, molecules, organisms, templates, and pages, the objective was to promote reusability, consistency, and scalability across digital products.

Colors

Color Guide

SwipBox colour shades

Atomic Design System1.0 > Colour Guide v.1.0

Colour variables

The colour variable should have same name as in figma file. The variable are used in CSS file to make a more accessible code and to help us to easily make changes if it is required to updates any specific colour.

Example:

● primary-25

Colour classes

The primary colour is your "brand" colour, and is used across all interactive elements such as buttons, links, inputs, etc. This colour can define the overall feel and can elicit emotion. The variation of colours is depending on variation 500. 500 is the base colour and with 10% darker variation on right and 20% lighter variation on left.

Primary

The primary colour is your "brand" colour, and is used across all interactive elements such as buttons, links, inputs, etc. This colour can define the overall feel and can elicit emotion. The variation of colours is depending on variation 500. 500 is the base colour and with 10% darker variation on right and 20% lighter variation on left.

Columns: 8
Gutter: 20px
Total width: 800px

Mobile

Mobile
Columns: 4
Gutter: 20px
Total width: 400px

Grid System

While you can change the padding and margin of your grid to match your project, the number of columns must remain the same to ensure a good transition between design and development.

Grid

The grid system is designed to be responsive, meaning that it adapts to different screen sizes and devices. It uses a 12-column system by default, but this can be customized to use any number of columns.

- 1. Widescreen**
A widescreen offers a greater width compared to the desktop view. It is capable of accommodating resolutions of 1440 and higher.
The widescreen has a fixed grid size of 1200px. This grid size remains constant with 20px gutter until the screen width reaches a minimum of 1200px.
- 2. Desktop**
The desktop view covers all screen sizes ranging between tablet to widescreen view.
Desktop view ranges from 1024px to 1200px. The grid will remain responsive with 12 columns and 20px gutter.
- 3. Tablet**
The tablet view covers all screen sizes ranging between mobile to desktop view.
Tablet view ranges from 768px to 1024px. The grid will become responsive with 8 columns and 20px gutter.
- 4. Mobile**
The mobile view covers all screen sizes ranging between mobile to tablet view.
Mobile view ranges from 320px to 768px. The grid will become responsive with 4 columns and 20px gutter.

Total width: 800px

Mobile

Mobile
Columns: 4
Gutter: 20px
Total width: 400px

Navbar

The navbar is important for saving more vertical space. The navbar is often designed to be easily accessible and visible, providing a consistent way for users to navigate within the website.

- 1. Wide Screen & Desktop**
The default width of the navigation bar will be set to 1200px. It will be aligned to the left.
- 2. Tablet**
A wider on tablet view shows with icons only. The default width is set to 800px. Subnav contains an action factor to expand it over your grid. The expanded width will be 1200px.
- 3. Mobile**
The mobile view shows a button in the global top bar with height of 50px. By clicking the hamburger button, vertical navbar appears from left side using expansion on screen. Close the navbar by clicking the close icon button within the navbar or by clicking anywhere outside the navbar.

Modals

Modals v.1.0

In a design system, modal guidelines establish a consistent framework for their appearance, behavior, and interaction. These guidelines ensure that modals maintain a cohesive visual language while delivering a seamless and intuitive user experience.

Animation

Animation

When modals are called, an overlay of #000 with 25% opacity is created. The modal is shown at the center of the screen with dissolve transition for 0.3 sec ease. The same animation is shown when the modal is closed.

Note!

Ensure that modals close upon clicking outside of their boundaries, and restrict any interaction with content beneath the modal until the modal is closed.

Responsiveness

Heading: Should be a single liner.

Description: The Description can me more than single line and is shown according to the design.

Button group: The button group will wrap right and overflowing button will move below.

Links

For modal placement in the browser, see [Grid system](#) page.

Modals use elevation-5, see [Elevation](#) page.

Small modals

Small modals mostly deals with the confirmation, information, and alert modals.

Small modals

Small modals mostly deals with the confirmation, information, and alert modals.

Default

These modals are used for confirmation.

Alert

These modals are used when action is perform which can change or have effect on the application.

Success

These modals are use for successful status of any activity.

Conclusion

By embracing the principles of Atomic Design and establishing a comprehensive design system, the organization successfully addressed the challenges of inconsistency and inefficiency in digital product development. The design system served as a cornerstone for fostering collaboration, ensuring consistency, and driving innovation across digital products, ultimately delivering enhanced user experiences and tangible business value.

SwipBox End user App

Make pickups and returns easy for your customers

OVERVIEW

SwipBox End User App is a cutting-edge mobile application designed to revolutionize parcel management for users.

Offering a seamless and convenient solution, the app enables users to pick up and drop off parcels at their nearest service points using smart locker compartments. With features such as Bluetooth connectivity, parcel transfers, and accessibility enhancements, SwipBox End User App redefines the way users manage their deliveries.

ROLE & DURATION

Product Designer / UX Engineer
User Research, Interaction, Visual design, Prototyping & testing

Jan 2022 - March 2024

CLIENT

The Problem

Traditional parcel delivery methods often lack convenience and flexibility, requiring users to wait for deliveries or visit crowded post offices to collect parcels. This can lead to inefficiencies, delays, and inconvenience for users.

There is a need for a solution that empowers users to manage their parcels on their own terms, with the flexibility to pick up and drop off parcels at their convenience.

Our main goal, besides answering our research question, was to..:

The primary goal of SwipBox End User App is to provide users with a convenient and efficient way to manage their parcels. By offering a user-friendly interface, seamless Bluetooth connectivity for locker access, and features such as parcel transfers, the app aims to simplify parcel management and enhance the user experience. The objective is to empower users to take control of their deliveries and eliminate the hassles associated with traditional parcel delivery methods.

High Fidelity Design

Mockups will be created to illustrate the redesigned user interfaces, showcasing the improved layout, navigation, and visual elements.

PICK YOUR PARCEL

order to connect to parcel lockers, certain permissions are required. While using the app allow the requested permissions, such as Bluetooth.

HOW TO USE THE APP

Take your parcel from the compartment shown. Remember to close the door properly

APP ONBOARDING

Apple watch App

Make picking up parcels even easier. Let your users pick up their parcels using just one hand by simply tapping their Apple Watch.

Accessibility Enhancements

SwipBox End User App prioritizes accessibility to ensure that all users, regardless of their abilities, can effectively utilize the app. Accessibility enhancements include support for VoiceOver, TalkBack, dynamic text sizes, and intuitive gestures to navigate the app easily. By making the app accessible to all users, SwipBox aims to promote inclusivity and usability for everyone.

Rules for accessibility

Text to speech rules

The following are the rules that are followed in the document:

Visually hidden text (VHT)
Visually hidden text is a form of accessibility, in which content is hidden from sighted users, yet, the content is available for screen reader users.
Visually hidden text is shown in the document with double quotation, blue colour and medium font.
Format: "Write some text"

Accessibility feature reader (AFR)
Accessibility feature reader reads the properties of a component. For example, if there is a button, AFR will read the button property by itself, and should therefore not be mentioned in the component placeholder.
AFR text is shown in the document with curly brackets, grey colour and italic font.
Format: {Property - double tap to activate}

Few properties that are used in the document:

- {Button - double tap to activate}
- {Dropdown - double tap to activate}
- {Text field - double tap to activate}
- {Menu - double tap to activate}

Visually appeared text (VAT)
Visually appeared text is a form of accessibility, in which the reader will read exactly what is written on the app screen.
Visually appeared text is shown in the document with double quotation, grey colour and light font.
Format: "Write some text"

SwipBox Infinity Global End User App 5.1.11 — 6
Accessibility 1 v. 1.2 - 12/9 2023

App reader rules

App component behaviour rule

Following are the rules that are followed in the document:

Screen titles
When navigating to any new screen, the reader will read the title of the screen even if the header is visually hidden.

If the screen title is visually hidden:
Format: "Write some text"
If the screen title is visible:
Format: "Write some text"

Dialogues

- Read the exact text from Dialogues
- Vibrate the mobile when a Dialogue appears on the screen to notify the user
- When a Dialogue displays on the screen, leave other content on app and first start reading the Dialogue content.

Toasts

- Read the exact text from toasts
- Vibrate the mobile when a Dialogue appears on the screen to notify the user
- When a toast displays on the screen, leave other content on the app and first start reading the toast content.

SwipBox Circuit App

An intelligent label that enables reusable alternative to single-use packaging

OVERVIEW

Circuit App is a revolutionary mobile application designed to optimize parcel management and streamline logistics operations. Developed to work seamlessly with Circuit packaging units, the app empowers users to update packaging with accurate order details, ensuring precise shipment to the correct recipients.

With features such as order scanning, packaging configuration, firmware updates, and packaging location tracking, Circuit App revolutionizes the way parcels are managed and shipped.

ROLE & DURATION

Product Designer / UX Engineer
User Research, Interaction, Visual design, Prototyping & testing

Oct 2022 - March 2024

The Problem

Traditional parcel management systems often lack efficiency and accuracy, leading to misrouted shipments, delivery delays, and customer dissatisfaction. Manual processes for updating packaging with order details are prone to errors and inconsistencies, while limited visibility into packaging locations adds to operational challenges.

There is a pressing need for a solution that automates the packaging update process, enhances accuracy, and provides real-time visibility into packaging locations.

Our main goal, besides answering our research question, was to...:

The primary goal of Circuit App is to provide a user-friendly and efficient solution for updating packaging with accurate order details, ensuring precise shipment to the correct recipients. By automating the packaging update process and integrating features for firmware updates and packaging location tracking, the app aims to streamline parcel management, reduce errors, and improve operational efficiency.

High Fidelity Design

Mockups will be created to illustrate the redesigned user interfaces, showcasing the improved layout, navigation, and visual elements.

PACK ORDER FLOW

CIRCUIT APP

Streamlined Packaging Configuration Flow

The Packaging Configuration Flow in Circuit App offers a seamless and efficient process for users to update packaging details. Users begin by scanning or entering the packaging ID directly into the app, initiating the configuration process. Next, they select the appropriate packaging type from a predefined list, ensuring accurate categorization. With just a few simple steps, the app automatically starts the configuration, updating the packaging with the necessary order details. This streamlined flow minimizes manual errors and ensures that packaging is accurately configured for precise shipment to the correct recipients.

Project Learnings

1. Automation for Efficiency

Automating manual processes, such as updating packaging details and tracking parcel locations, improves efficiency and reduces errors. By leveraging technology, Circuit App streamlines parcel management tasks, saving time and resources for users.

2. Training and Support

Providing comprehensive training materials, tutorials, and support resources within the app is crucial for user adoption and satisfaction. Clear guidance and assistance empower users to make the most of the app's features and functionalities.
